

## *“ The Advanced pitch protection ”*

SeeGrow Enka® TurfProtect is a product to protect your surface during a concert, photoshoot or other event for 4 consecutive days with the SeeGrow Enka® TurfProtect technology.

Protection for the growing area used in between the hard surface and the grass covering: This is a 3 dimensional mat with a unique structure using high performance geosynthetics.

Valuable protection when grass surfaces are subject to heavy traffic with tractors or other wheeled implements and a temporary solution to protect the grass at event time.

*“Maximum protection for natural turf fields in some of the most high traffic areas while your pitch can still breath”.*

- Rain will flow through
- Air can still circulate
- Grass blades remain intact
- Rolled up within minutes

**SeeGrow offers 2 different types of 3 dimensional mats with a unique high performance geosynthetics structure.**

They differ in which objects they should protect and how long the protection should last:

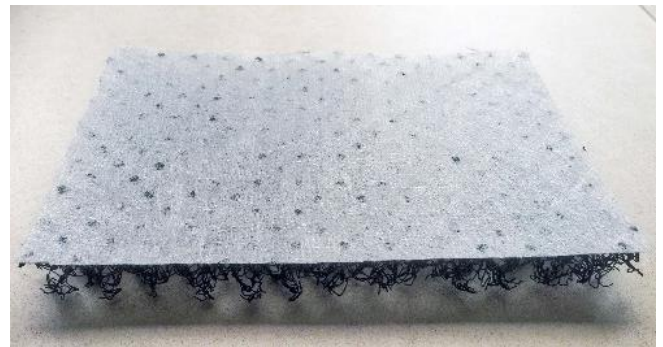

**SeeGrow Enka® TurfProtect 7225/1/2/4**

The SeeGrow Enka® TurfProtect has a very high tensile strength which means it can withstand more weight and can be used without a cover.

Available in 1, 2 and 4m wide

**SeeGrow Enka® TurfProtect Plus**

The SeeGrow Enka® TurfProtect Plus has the advantage of a breathable geo textile cover which can stop heels, spikes and debris from getting onto the grass.

Available in 1m wide only
